EDUCATION

Georgia Institute of Technology

Master's Degree, Computer Science

Atlanta, GA (OMSCS)

2024 – 2026 (Expected)

Dr. Vishwanath Karad MIT World Peace University

B.Tech. Computer Science and Engineering | CGPA: 9.44/10.00

Pune, India

2018 – 2022

PROFESSIONAL SUMMARY

Results-oriented Software Engineer with 3 years of experience in full-stack development, microservices architecture, and data processing. Proficient in Java, Spring Boot, Python, SQL, and cloud technologies. Proven ability to design and implement scalable solutions, optimize system performance, and lead project migrations. Seeking to leverage expertise in software development and distributed systems to contribute to innovative projects.

WORK EXPERIENCE

eQ Technologic

Software Engineer

Pune, India

Aug 2022 – Current

- Developed and enhanced software solutions within the Adapter and Plugins development team, enhancing product capabilities and interoperability.
- Engineered key solutions in the intermediary data processing layer (Adapter), establishing robust communication between eQube products and end applications.
- Developed components for a Domain-Specific Language (DSL) targeting relational databases, utilizing Apache Calcite and Apache Spark to achieve advanced query processing and optimization.
- Spearheaded key aspects of migrating over 60 internal projects from Redmine and SVN to Jira and Bitbucket, resulting in improved version control capabilities and streamlined project management workflows.
- Architected and developed scalable, resilient microservices using Spring Boot and distributed computing principles, enhancing system performance and reliability.

PROJECTS

Revant - Discord Compiler Bot | [GitHub](#)

key skills: Rust, Serenity, Multithreading, Posix

- Revant bot can retrieve code from discord messages containing a code block and bot commands.
- The retrieved code is compiled and executed and its result is posted back on the discord channel.
- The bot is multithreaded and makes use of 8 long-running threads which are associated with workers and each worker makes POSIX calls to restrict CPU and memory usage for its subprocess.

Chess Engine | [GitHub](#)

key skills: Python, Flask, JS

- Created a python chess engine using python and Flask which uses minimax heuristic search to determine the next move.
- The chess engine makes use of two modes, with minimax algorithm and minimax with alpha-beta optimization.
- The chess engine's performance was analyzed by having it play against the stockfish chess engine.

PUBLICATIONS

Comparative analysis of minimax algorithm with alpha-beta pruning optimization | [Springer](#)

Authored a paper detailing a chess game engine incorporating minimax algorithm for game tree search and alpha-beta pruning for enhanced efficiency. Includes expository presentation and rigorous experimentation on the effectiveness of the pruning method.

SKILLS

Programming: C, Rust, C++ , Python, Kotlin, Java, Golang, SQL

Frameworks and Libraries: Spring Boot, Apache Calcite, Flask, Django, NodeJS, ReactJS, ExpressJS, Serenity, TensorFlow, Keras, PyTorch, OpenMP, Celery

Databases: MongoDB, MariaDB, PostgreSQL

Tools and Platforms: Git, GNU/Linux, Jira, Bash, Apache Kafka, Docker, Google Cloud Platform (GCP), REST APIs

Methodologies: Microservices Architecture, Distributed Systems, Agile, Version Control (Git, SVN, Bitbucket), Project Management (Jira, Redmine)

Full Stack Web Development With React Specialization

ReactJS, Express.js, MongoDB, HTML5, CSS, Bootstrap, Redux, React Native, NodeJS

GCP Cloud Engineering Track

Google Cloud Platform, Docker, VM, Git, VPS

Python, and Django Full Stack Web Developer Bootcamp

Django, Python, REST API, Django ORM, JQuery, MVT
